

Dineshkumar (Deekay) Suresh

Full Stack Software Engineer | TypeScript . React . Node.js . Go . Python . PostgreSQL . AWS

dineshdeekay.me@gmail.com | +61 425 410 165 | Melbourne, VIC | Full Australian working rights, no sponsorship required

[linkedin.com/in/deekay](https://www.linkedin.com/in/deekay) | github.com/Deekaaaay | arcusvision.app | dineshsuresh.com

Full-stack software engineer who designs, builds, and operates production systems end to end: backend services and APIs, relational data models, cloud infrastructure, and delivery pipelines. Founded ArcusVision and run it solo as a live production system on TypeScript, React, Go, and AWS. Commercial background spans a sustainability platform, an AI education product, an agritech IoT platform, and enterprise client delivery in Go, Node.js, Python, and PHP. Melbourne based, full Australian working rights.

EXPERIENCE

Founder & Software Engineer | ArcusVision

December 2025 - Present | Melbourne, AU

- Architected and deployed a Go API on AWS Lambda behind API Gateway, structured in clean layers with dependency injection, and operated it in production as the sole engineer.
- Enforced per-user data isolation with PostgreSQL row-level security at the database layer, reinforced by ownership checks in the service layer, holding tenant separation on direct access paths.
- Implemented JWKS-based ES256 token verification decoupled from the identity provider, with a cached keyset and server-side token handling behind a proxy.
- Automated delivery with GitHub Actions OIDC federation into IAM (no static credentials) and AWS SAM infrastructure as code, with automated post-deploy health checks and staged rollout.
- Integrated OpenAI, Gemini, and Together AI behind a provider-agnostic interface with JSON-mode enforcement and automatic failover, degrading gracefully on provider outage.
- Gated releases with a Playwright end-to-end suite covering critical user journeys, and developed using AI coding agents (Claude Code, Cursor) with manual review of all generated output.
- **Stack:** Go, Node.js, TypeScript, Next.js, React, PostgreSQL, GORM, Supabase (Auth, RLS), AWS (Lambda, API Gateway, S3, IAM, CDK, CloudWatch), Vercel, Docker, GitHub Actions, CI/CD, Playwright, OpenAI API, Gemini API, Together AI

Full Stack Developer | LAB ZERO

July 2026 - Present | Melbourne, AU (Freelance)

- Delivered full-stack features across a Flask/PostgreSQL API and a React (TypeScript) frontend as one of four engineers under a pull-request-reviewed workflow.
- Architected server-authoritative state for an edit-gating workflow, exposing lock state through the API so clients render from server truth rather than re-deriving it, specified in OpenAPI and covered by integration tests.
- Designed and built the frontend in React and TypeScript, delivering polished, responsive interfaces across the platform, and shipped a business-owner dashboard consolidating platform activity and certification status into a single view.
- Managed production deployments to a Kubernetes cluster on UpCloud, owning the path from merged pull request to live release.
- Resolved a cross-tier data-resolution defect by making certification level a required query parameter and updating the OpenAPI contract and its consumer in lockstep, and built a schema-driven assessment module against a typed API contract.
- **Stack:** Python, Flask, SQLAlchemy, Alembic, PostgreSQL, Pydantic, OpenAPI, pytest, TypeScript, React, Vitest, Kubernetes, UpCloud, Docker, Git/GitHub

Software Engineer | StudyPulse

March 2026 - June 2026 | Melbourne, AU (5-Person Agile Team)

- Delivered a production education platform across five sprints in a five-person team, building React/TypeScript dashboards and Node.js and Python (FastAPI) services.
- Implemented the authentication pipeline (JWT, role-based access) with Alembic-managed schema migrations, and an LLM-backed question-generation service with structured output validation.

- Automated end-to-end testing of critical flows with Playwright under a peer code-review process led by a senior engineer.
- **Stack:** TypeScript, React, Node.js, Python (FastAPI), PostgreSQL, JWT, Alembic, Playwright, Docker, CI/CD, Jira

Software Engineer - Internship | AquaTerra

November 2024 - August 2025 | Carlton, VIC (Hybrid)

- Migrated a monolithic Node.js codebase into modular services on AWS ECS without downtime on the live customer-facing system, holding API contracts stable throughout.
- Built event-driven ingestion for continuous IoT sensor streams on AWS IoT Core, using Redis for hot-path caching and DynamoDB alongside PostgreSQL to match differing consistency requirements.
- Operated the platform in production: Level 2/3 incident response, root-cause analysis, and observability through CloudWatch logging and alerting.
- **Stack:** Node.js, TypeScript, React, Python, PostgreSQL, Redis, DynamoDB, AWS (ECS, Lambda, IoT Core, EC2, S3, IAM, CloudWatch), Docker, CI/CD, REST APIs

Software Engineer | Avasoft

August 2022 - May 2024 | Chennai, India

- Promoted from trainee to full-stack engineer within four months; delivered across three client projects in a 60-plus-person engineering organisation.
- Led a third-party webhook integration into a legacy Go service as project lead, owning scoping, delivery coordination, and production correctness.
- Built Go microservices on AWS and full-stack features in React, TypeScript, and Node.js against MySQL and MSSQL; integrated Okta (OAuth) and SonarCloud into the delivery pipeline.
- Ran unit, integration, and regression testing across delivery cycles, and mentored two engineers to independent delivery.
- **Stack:** Go, Node.js, TypeScript, React, PHP Symfony, MySQL, MSSQL, MongoDB, Okta (IAM/OAuth), REST APIs, Jest, SonarCloud, Git, CI/CD, Jira, Confluence

EDUCATION

Master of Information Technology - Full-Stack, Cloud & DevOps

RMIT University, Melbourne | July 2024 - August 2026 | GPA: 3.0

Bachelor of Engineering - Electronics & Communication

S.A. Engineering College, Chennai | June 2019 - June 2023 | 85.3%

PROJECTS

[ArcusVision](#) | Go . Node.js . TypeScript . Next.js . React . PostgreSQL . AWS

Live production SaaS, solo-built and operated. Go API on AWS Lambda, multi-tenant PostgreSQL with row-level security, JWKS authentication, infrastructure as code, and end-to-end test gating.

[RADO Piling & Construction](#) | Next.js . TypeScript . React . Tailwind CSS . Vercel

Production corporate website for a construction firm, delivered solo from brief to handover. Bilingual EN/ZH, media streaming, structured-data SEO.

TECHNICAL SKILLS

Core Stack: TypeScript . React . Next.js . Node.js . PostgreSQL

Backend: Go . Python . Node.js . Flask . FastAPI . REST APIs . Microservices . Event-Driven Architecture . PHP Symfony

Cloud & Infra: AWS (Lambda, ECS, API Gateway, S3, IAM, CloudWatch) . AWS SAM/CDK . Infrastructure as Code . Docker . GitHub Actions . CI/CD

Data: PostgreSQL . GORM . Prisma . SQLAlchemy . MySQL . MSSQL . MongoDB . Redis . DynamoDB . Row-Level Security . Schema Design

Security: JWT/OAuth (JWKS, ES256) . Role-Based Access Control . Okta . Server-Side Token Handling

Testing: Playwright . Jest . pytest . Vitest . Unit, Integration, and End-to-End Testing

AI & Tools: OpenAI API . Gemini API . Together AI . Multi-Provider LLM Integration . Claude Code . Cursor . GitHub Copilot

CERTIFICATIONS

Atlassian Agile Project Management Professional Certificate: Atlassian & LinkedIn Learning | May 2025

Career Essentials in GitHub Professional Certificate: GitHub & LinkedIn Learning | Aug 2025

Linux Fundamentals: Coursera - LearnQuest | May 2025
