Carlton, VIC

Full-Stack Software Engineer with 3+ years of commercial experience shipping scalable web applications, cloud-native backend systems, REST APIs, and AI-powered SaaS products. Founder and sole engineer of ArcusVision, a live production AI productivity SaaS with 338+ active users, built and deployed independently from architecture through to CI/CD - demonstrating end-to-end product ownership across the full stack. Proficient in TypeScript, JavaScript, React, Next.js, Node.js, Go, Python, and PHP across AWS and cloud-native environments. Experienced with event-driven architecture, microservices, Docker, PostgreSQL, MongoDB, and AI/LLM integrations including RAG pipelines and LLM function calling. Proficient in AI-assisted development using Claude Code and Cursor. Completing a Master's in Information Technology at RMIT Melbourne, actively seeking full-time Software Engineering roles in Melbourne.

EXPERIENCE

Founder & Full-Stack Engineer · [ArcusVision](https://arcusvision.app)

Jan 2025 – Present | Melbourne, AU
(Remote)

- Founded and independently engineered ArcusVision from zero to **338+ active users**, taking full ownership of system architecture, API design, cloud infrastructure, CI/CD pipelines, and ongoing product iteration with no external funding or team
- Designed and built **event-driven backend pipelines** in Node.js, Go, and Python handling real-time concurrent user sessions, multi-factor task scoring algorithms, habit analytics, and AI API integrations (OpenAI, Gemini, Together AI)
- Engineered a production **RAG pipeline with embedding-based retrieval and LLM function calling**, powering AI-generated goal roadmaps and intelligent task scheduling - hands-on experience with agentic AI infrastructure in a live product
- Architected a modular, service-oriented backend with clean REST API boundaries, applying **SOLID design principles**, automated CI/CD deployment via GitHub Actions, and AES-256 encryption with Row-Level Security for production data privacy
- Built **full-stack, full-cycle features end-to-end**: Next.js and React frontend, Node.js and Go backend services, PostgreSQL data models, AWS Lambda serverless functions, and Telegram Bot automation - all shipped iteratively to real users
- Proficient in AI-assisted development using **Claude Code and Cursor** throughout the full development lifecycle, applying strong independent judgment to validate output and maintain production code quality
- **Stack**: Next.js, React, TypeScript, Go, Python, Node.js, AWS Lambda, AWS EC2, AWS S3, AWS IAM, PostgreSQL (Supabase + RLS), MongoDB, Docker, GitHub Actions, OpenAI API, Gemini API, Together AI, Telegram Bot API, Vercel

Software Engineer - Internship · [AquaTerra](https://aqua.terra.com.au)

Nov 2024 – Aug 2025 | Carlton, VIC
(Hybrid)

- Led backend architecture revamp for a Node.js IoT application on AWS, refactoring a monolithic codebase into a **modular, service-oriented architecture** with clean REST API boundaries - improving scalability, reliability, and long-term maintainability
- Built real-time alerting systems and event-driven data pipelines handling continuous IoT sensor streams on AWS IoT Core, translating high-volume concurrent data into customisable dashboards and advanced analytics features that directly increased user engagement
- Implemented unit tests, UML documentation, secure IoT authentication protocols, and encryption layers aligned to production engineering standards; contributed to internal documentation and engineering process improvements
- Collaborated across engineering, data science, and product management teams in Agile ceremonies to deliver end-to-end backend features on schedule; participated actively in code reviews and sprint planning
- **Stack**: Node.js, JavaScript, React, PostgreSQL, AWS (Lambda, IoT Core, EC2, IAM), Docker, GitHub Actions, REST APIs

Software Engineer - Backend Specialist · [Avasoft](https://avasoft.com)

Aug 2023 – Feb 2024 | Chennai, India

- Built distributed REST API backend services in TypeScript and Go for a high-throughput technical assessment platform, backed by MSSQL and MongoDB, delivering a **25% improvement in assessment accuracy** through enhanced analytics and reporting
- Drove architectural decisions on microservice design, applying SOLID principles, clean code standards, and modular patterns; led code reviews and authored technical documentation adopted as the team's implementation reference standard

- Integrated Okta (IAM/auth), Azure cloud services, and SonarCloud for automated code quality enforcement; applied security best practices for user authentication and sensitive data handling throughout
- Delivered across the full development lifecycle in an Agile environment - requirements analysis, design, development, testing, code review, and production go-live support including post-deployment troubleshooting
- **Stack:** TypeScript, Go, MSSQL, MongoDB, Okta, Azure, SonarCloud, REST APIs, Git, CI/CD, GitHub Actions

Software Engineer · [Avasoft](#) Dec 2022 – Aug 2023 | Chennai, India

- Engineered a scalable logistics platform in PHP Symfony, Go, and jQuery/Twig serving global supply chain operations, designing modular services to decompose a monolithic codebase and reduce integration complexity for new feature delivery
- Conducted rigorous unit testing after each delivery cycle; collaborated cross-functionally with QA, product, and client teams to align technical deliverables with business requirements and objectives
- **Stack:** PHP Symfony, Go, JavaScript, jQuery, HTML, Twig, MySQL, REST APIs, Git

Software Engineer Intern · [Avasoft](#) Aug 2022 – Dec 2022 | Chennai, India

- Contributed to full-stack feature development in React.js, Node.js, and MySQL under senior mentorship; promoted to full-time Software Engineer based on code quality and delivery performance
- **Stack:** React.js, Node.js, JavaScript, HTML, CSS, MySQL, Git

EDUCATION

Master of Information Technology - Full-Stack, Cloud & DevOps RMIT University, Melbourne	Jul 2024 – Aug 2026 GPA: 3.0
Bachelor of Engineering - Electronics & Communication S.A. Engineering College, Chennai	Jun 2019 – Jun 2023 85.3%

SELECTED PROJECTS

[RADO Piling & Construction - Corporate Website](#) | Next.js · TypeScript · React · Tailwind CSS · Framer Motion · Cloudinary · Vercel

Production corporate site for a Singapore-based engineering firm. Bilingual EN/ZH, glassmorphism UI with dark/light themes, Cloudinary video streaming, Web3Forms contact integration, and SEO with JSON-LD schema. Delivered independently from brief to client handover.

[Personal Portfolio](#) | React.js · CSS · EmailJS · Responsive Design

Interactive portfolio with dynamic animations, project showcases, and automated contact via EmailJS. Fully responsive across desktop, tablet, and mobile.

TECHNICAL SKILLS

Languages	TypeScript · JavaScript · Go · Python · PHP · Java · SQL · Bash
Frontend	React · Next.js · Tailwind CSS · Framer Motion · HTML5 · CSS3 · PWA · Responsive Design
Backend & APIs	Node.js · Go · REST APIs · Microservices · Event-Driven Architecture · PHP Symfony · SOLID · OOP
Cloud & DevOps	AWS (Lambda, EC2, S3, RDS, IoT, IAM) · Docker · GitHub Actions · CI/CD · Vercel · Git
Databases	PostgreSQL · MongoDB · MySQL · MSSQL · Supabase · Row-Level Security · Query Optimisation
AI & LLMs	OpenAI API · Gemini API · Together AI · RAG Pipelines · LLM Function Calling · Embedding Retrieval · Claude Code · Cursor
Security	AES-256 · Row-Level Security · Okta IAM · Secure Auth Protocols · SonarCloud
Practices	Agile/Scrum · TDD · Code Review · Full-Cycle Delivery · SDLC · Technical Documentation · Pair Programming
